MOTOROLA

GTF374

Programming Cable

GENERAL

The GTF374 Programming Cable is a passive cable used to connect the mobile Professional Radio to the RLN4008 Radio Interface Box (RIB) when the radio is to be tuned or programmed.

The Programming Cable has a 10-pin male Telco connector at one end, which connects to the radio microphone connector, and a 25-way female 'D' type connector at the other end for connection to the RIB.

OPERATION

Refer to the relevant test/ programming procedures for the radio on test and connect the radio to the RIB as directed.

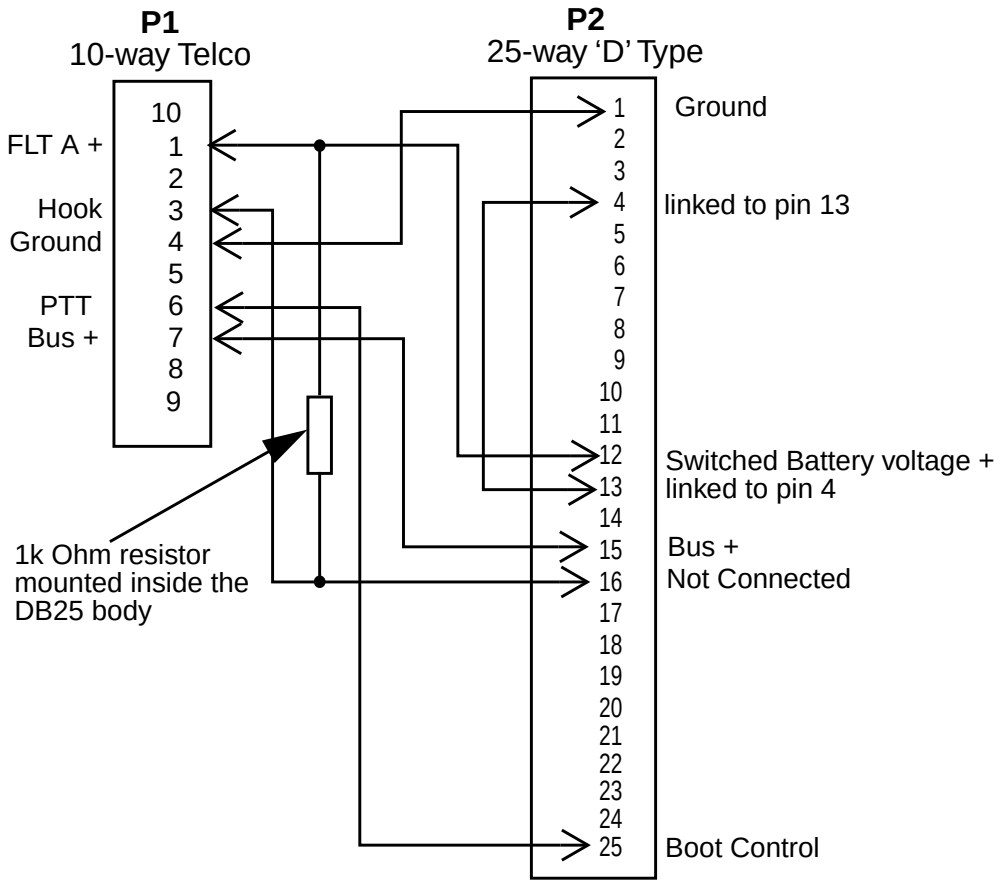

Caution

Do not disconnect the cable in the middle of a procedure. This may leave the radio incorrectly configured and degrade the radio performance

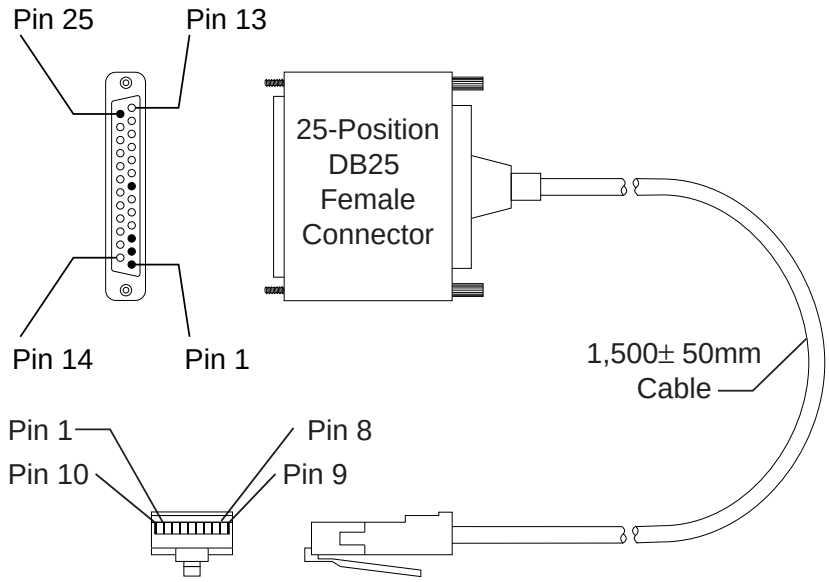

SERVICE

The Programming Cable is not repairable. Order a replacement cable as necessary.
